.THE DIGITAL PMO

WHAT IS THE DIGITAL PMO

- It is a classic PMO that masters digital project management tools bringing value and enhanced customer experience to its stakeholders
- It leverages modern tools, technology, and digitizes information
- It is about data processing and analysis coupled with automation

Like This

NOT This

“

Digital is at the core of today's successful PMO.

THE VALUE OF THE DIGITAL PMO

Speed Wins!!

Value to the Business

- Real-time
- Self Serve
- More accurate
- More forward looking
- Less costly
- Less effort

More Time for PEOPLE!!!

WHERE TO BEGIN

It's a mindset...

THINK.

2. THE CITIZEN DEVELOPER

CITIZEN DEVELOPMENT FRAMEWORK

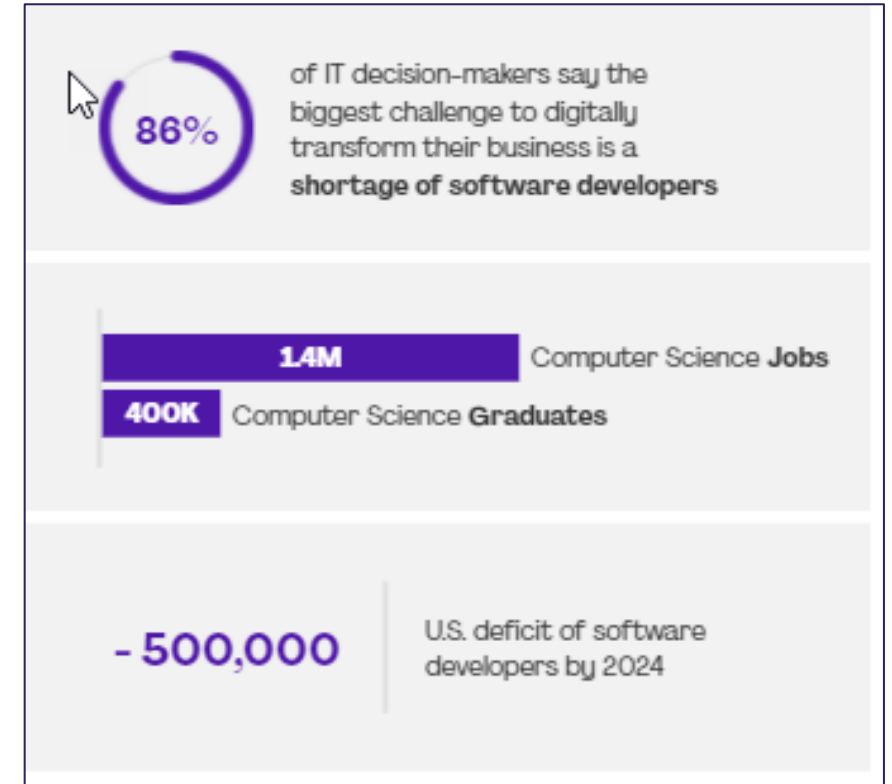

Agenda:

- Background
- Introducing the Citizen Development Framework
- What potential value does it bring to the business?
- How can project management professionals leverage this approach?
- What value does the Citizen Development Framework bring to the PM profession?
- Where do we go from here?

SOME BACKGROUND

- By 2030 – there will be 500 million applications in use within business, and B2C environments.
- There is just not enough technical resources to support these applications
- The use of low-code or no-code solutions will help bridge the gap between where we are and where the future is going
 - It is estimated by PMI that 400 million of those applications will be developed using a low-code or no code developer framework.
- What is needed to help bring value to this framework and to businesses?
 - Good processes – agile approaches
 - Project Management & Program Management support
 - Driving towards business value and unlocking business benefits

Source: PMI & Gartner

LOW CODE / NO CODE EXAMPLES

- The current state of using low code or no code solutions:
 - 47% using low code or no code solutions
 - 44% considering it
 - The demand for citizen developers is set to take off
- AppSheet – Google Product
- Unqork – [Field Guide to No Code Applications](#)
- Power Apps / Automate – leverage existing data/work in MS Office ecosystem

CITIZEN DEVELOPMENT FRAMEWORK

- What is Citizen Development?
- A framework and a process to quickly turn ideas into apps leveraging agile processes to iterate and gain valuable feedback from key stakeholders in real time.
 - Democratizes Development
 - Uses low code or no code tools to rapidly iterate and develop apps to support business goals

CITIZEN DEVELOPER FOUNDATION - PMI

Introducing Citizen Developer

Learn how to unlock the potential of citizen development in your organization.

Benefits

- Complimentary to existing PMI certifications
- Low Cost
- Gear up for change in market direction

Citizen Development Framework

Lightweight Touch Governance

Reduce management overhead while bringing clarity & guidance by which Citizen Development should occur

21

New Rules of Engagement

Create an engagement model to work with IT and not create a “shadow IT” .

Full Endorsement

Key organizational stakeholders should fully endorse using low-code or no code development solutions to rapidly innovate

Flexible Software Development

Establish an approach needed to introduce, scale and manage citizen development either in a small company or large enterprise.

CITIZEN DEVELOPMENT CANVAS

Three Core Themes:

- Learn the basics and best practices
- Unlock full Potential
- Coordinate Citizen Development in a secure and scalable fashion

Three Groups that make it possible:

- Practitioners
- Architects
- Strategists

WHERE CAN PROJECT PROFESSIONALS FIT IN?

- Project Delivery – support project teams using a servant leader model to bring out the full potential from each team.
 - ADO Boards
 - Jira
- Organizational Change – support organizational change by ensuring alignment amongst key stakeholders.
- Adoption of Citizen Development Framework
 - Operating Model
 - Citizen Development Maturity Model
 - Organizational Alignment
 - KPIs and Reporting
 - Ideation 2.0

CASE STUDIES

15 February 2021 | Digital PMO, Case Study

Two years ago, a global, established healthcare manufacturer started an ambitious journey of significant digital transformation. Their transformation was aimed at providing complementary services to their customers and entire value chain.

case study AUTOMOTIVE - DIGITAL REPORTING WITH A GLOBAL MANUFACTURER

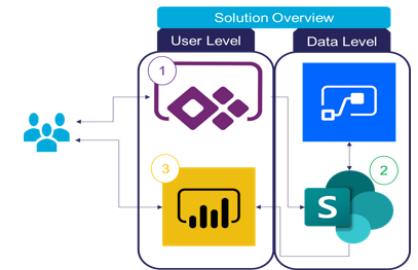

AUTOMOTIVE | TRANSFORMATION | DIGITAL | LEAN | AGILE

MI-GSO | PCUBED was brought in to help a Global Automotive Manufacturer set up a Scalable Business Dashboard to enhance consistency, transparency and accountability for packaging teams as they ready to deliver new models.

The new platform was free of additional license cost and built in the Power Platform in Office 365. It integrated with additional tools like Oracle and Excel - linking live costs and procurement into a visual dashboard. In a sharp **10 week program**, the team configured business applications, automated governance and produced a dynamic visual report.

These reduced the previous **manual reporting methods from 20% to less than 5%**, and the final project handover of **90 days was turned into a single button click**. This saves engineers time that could be put toward value-added activities.

The client benefited from **improved visibility of project status**, the ability to forecast and prioritise deliveries, along with **better cost control for new programs**. After successful deployment, further analysis uncovered other business scenarios this solution can now scale to, **creating a low-cost, rapid and integrated platform for the future of project and program management**.

Solution: Working with a Lean Delivery Approach, a Digital Delivery team from MI-GSO | PCUBED used existing tools within the Office 365 suite to create business applications and a digital dashboard. Combining Agile story creation, Lean Innovation and Project Management Excellence to deliver a dashboard that met the business requirements and provided key indicators the department. Making the right decisions, at the right time.

Benefits: Ten-fold reduction in time-spent reporting in the department, freeing up engineers and supervisors to collaborate and solve the problems in their business. The project tool & the team received a 9/10 average score for the solution, now being rolled out in the current and new delivery programs.
